Professional Summary

Computer Science graduate with experience in backend development, database design, and API integration. Proficient in Python, C++, and JavaScript with hands-on experience building scalable applications using technologies such as React, Django, and Supabase in Linux environments. Seeking a Software Development Engineer role to build reliable and scalable systems.

Education

The University of Texas Rio Grande Valley - *Cum Laude* (GPA: 3.67)

Edinburg, TX

Bachelor of Science, Computer Science

Dec 2025

Technical Skills

Programming Languages: Python, C++, JavaScript, HTML, CSS

Frameworks & Libraries: React.js, Next.js, Django, Express.js, Bootstrap, Tailwind CSS

Databases: SQLite, Supabase (Built on PostgreSQL)

Tools & Platforms: Git, GitHub, Google Maps Platform API

Technical Projects

Apartment Management Platform

- Led a personal full-stack web application using Next.js, React.js, Node.js, Express.js, Tailwind CSS, and Supabase.
- Served as project lead, managing development progress and delegating tasks to classmates while coordinating implementation across the team.
- Implemented role-based authentication and authorization, supporting separate interfaces and workflows for standard users and administrators.
- Developed RESTful backend APIs to manage property listings, leases, and user accounts.
- Integrated third-party services including Google Maps Platform for geolocation and Stripe for secure payment processing.
- Designed a normalized relational database schema, migrating from SQLite to a cloud-hosted Supabase database connected through the backend API.
- Prepared and configured the application for cloud deployment on Render, connecting the frontend, backend, and database infrastructure.

Task Manager Web Application

- Built a full-stack task management system using Django and SQLite following the MVC architecture.
- Implemented secure user authentication, session management, and CRUD operations.
- Focused on backend development, database integration, and clean code organization

Jetson Nano DNS Ad Blocker

- Developed a network-wide ad blocking system using the NVIDIA Jetson Nano and configured Pi-hole for DNS-level traffic filtering
- Configured Linux, DNS, and router settings to route network traffic through the Jetson Nano for centralized ad and tracker blocking across multiple devices
- Monitored network analytics, managed domain blacklists/whitelists, and troubleshooted connectivity and DNS resolution issues
- Gained hands-on experience with Linux system administration, embedded systems, networking, and cybersecurity/privacy concepts

Relevant Coursework

Data Structures and Algorithms, Databases, Web Development, Computer Networks,
Automata Theory and Computational Complexity
